

HSCサーベイによる銀河考古学

岡本桜子 (KIAA)

Galactic Archaeology with HSC wide survey

Wide survey: 1,400 deg², griz ~ 26mag

- ✧ Search new Galactic faint satellites
- ✧ Search new stellar streams at the outer halo
- ✧ Search new distant faint galaxies in the Local Group
- ✧ Study the properties of known streams, dSphs and dIrrs
- ✧ Probe 3D structure of Galactic outer halo

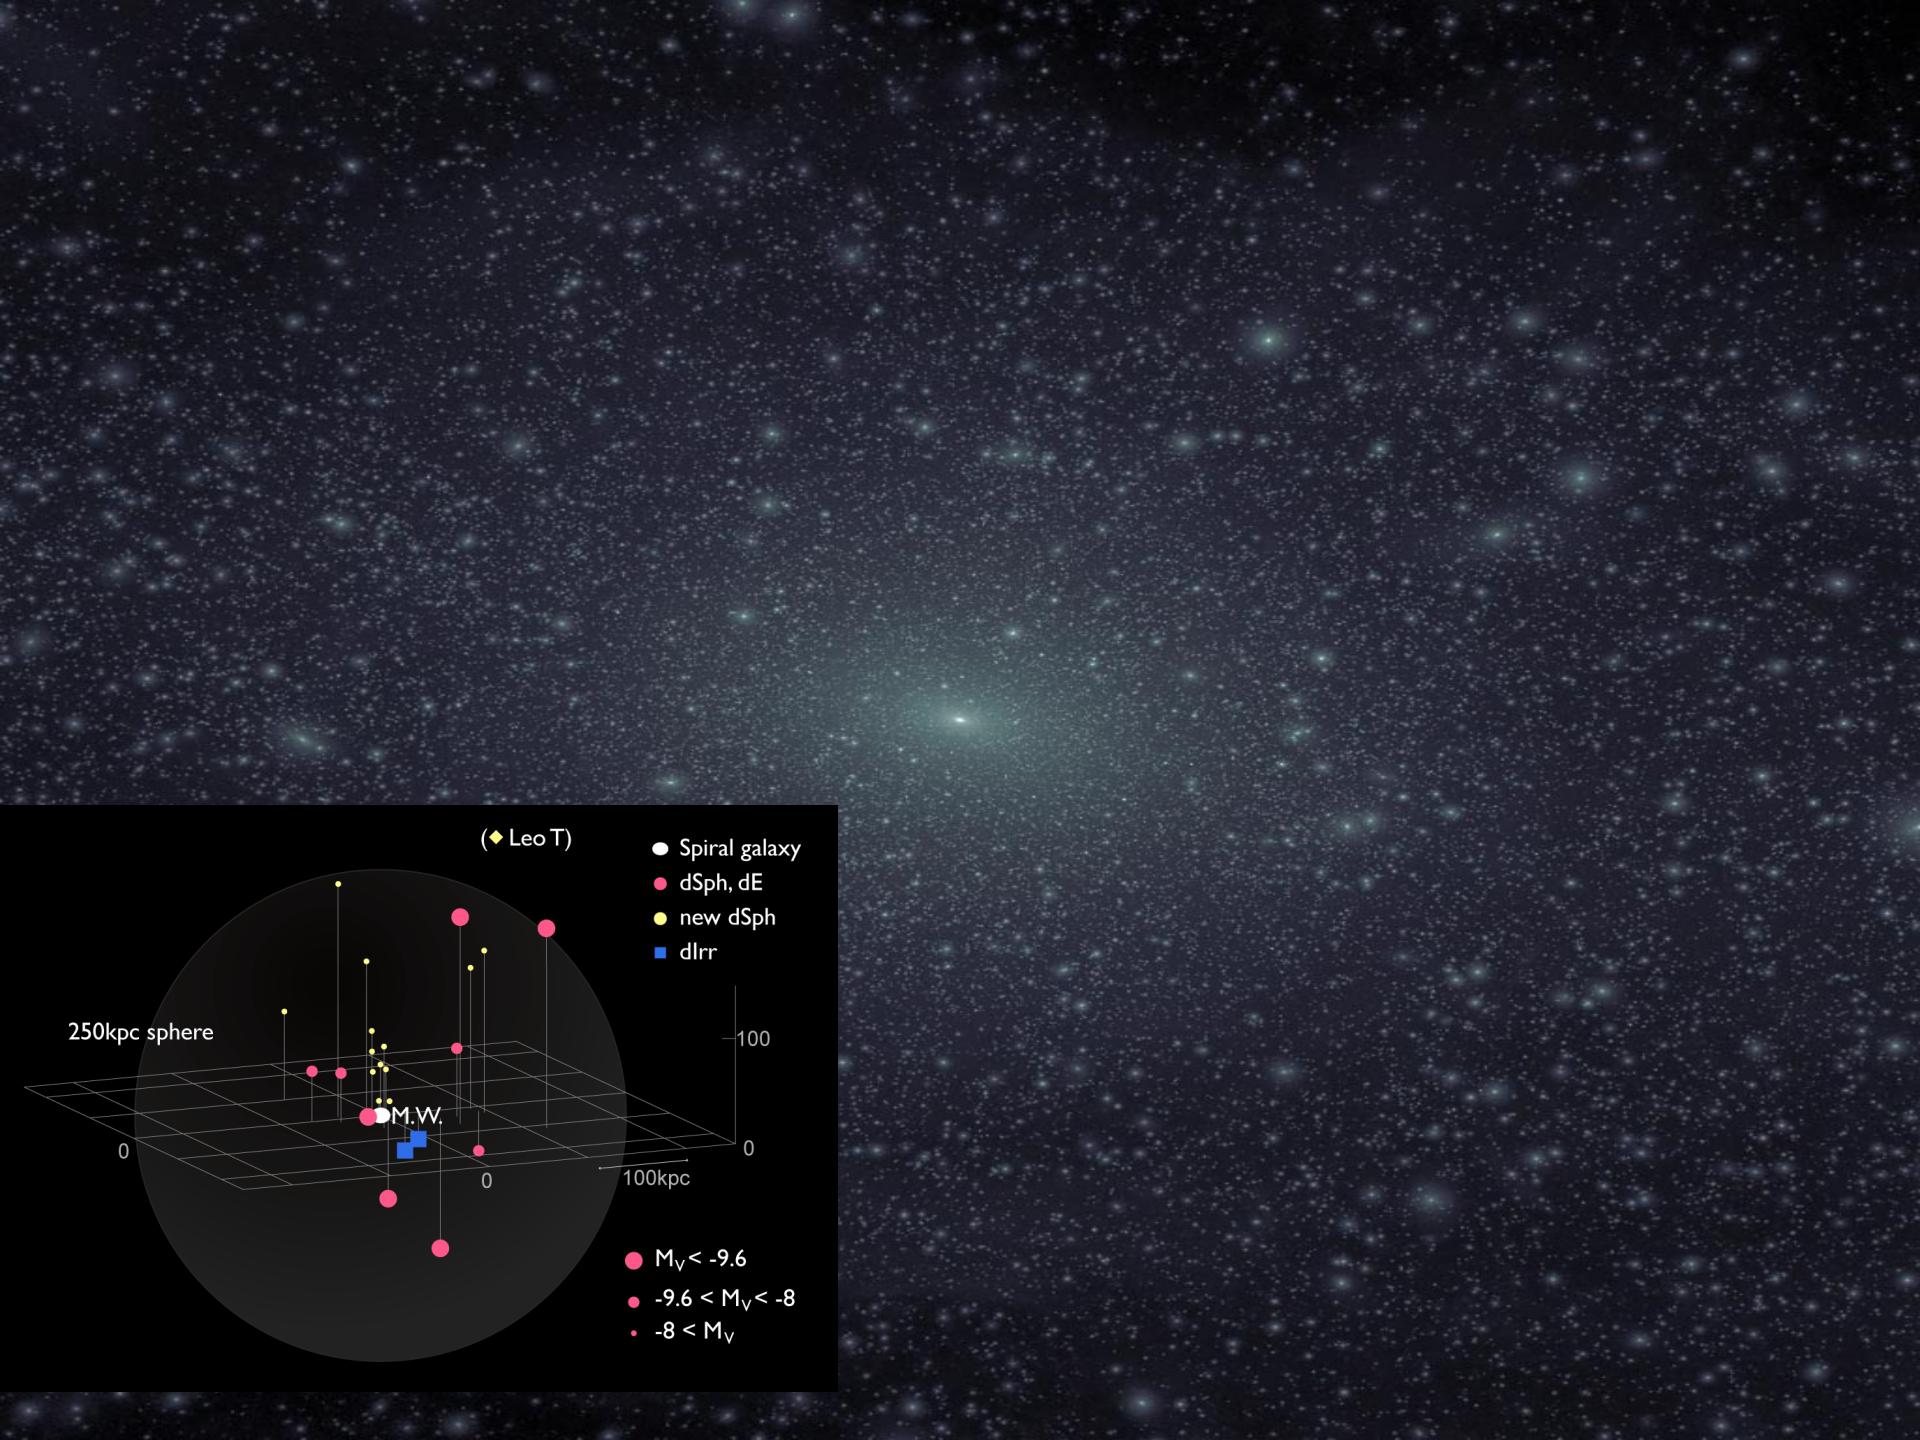

Complete sample of visible MW satellites

SFH of the faintest galaxy

Internal/External effects on SF in low-mass halo

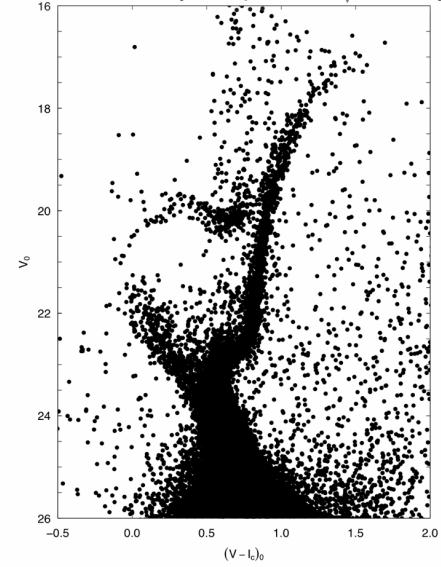

Distribution and Lumpiness of DM (sub)-halo

Verification of LCDM in the MW scale

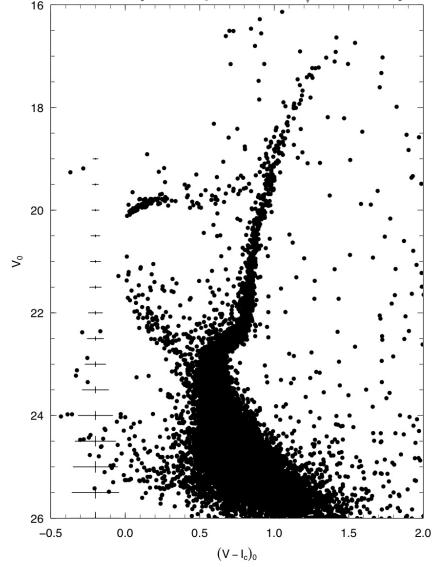

Stellar populations of UFDs

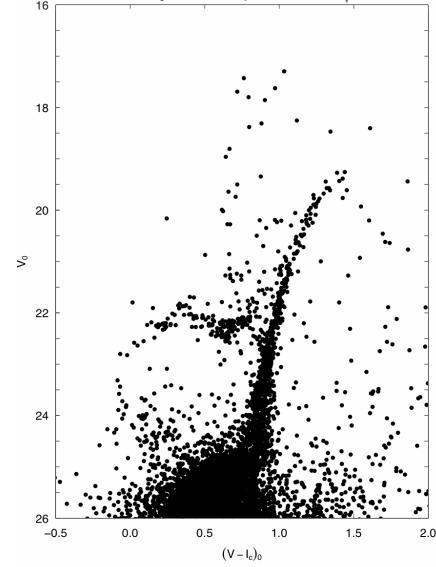

Draco (84kpc, $M_V=-8.7$)

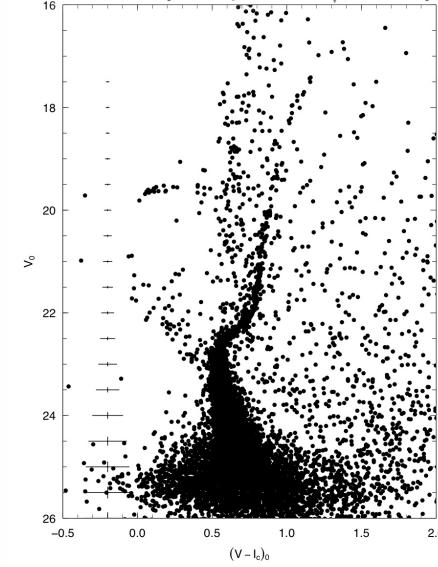

UMi (74kpc, $M_V=-8.5$)

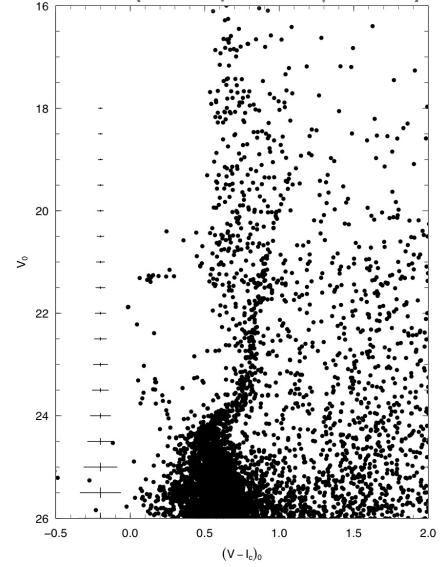

CVn I (223kpc, $M_V=-7.9$)

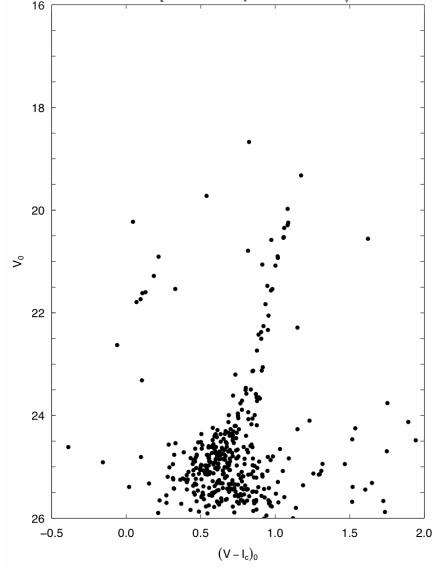

Boo I (64kpc, $M_V=-5.9$)

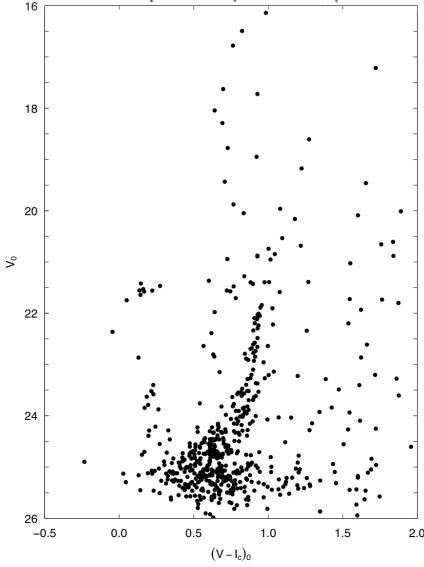

Her (141kpc, $M_V=-5.7$)

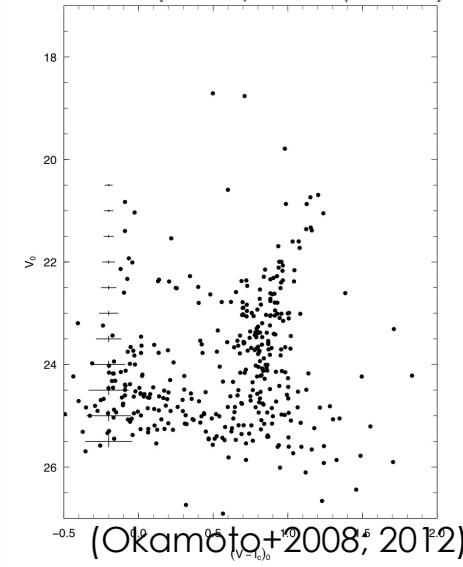

CVn II (159kpc, $M_V=-5.3$)

Leo IV (157kpc, $M_V=-5.0$)

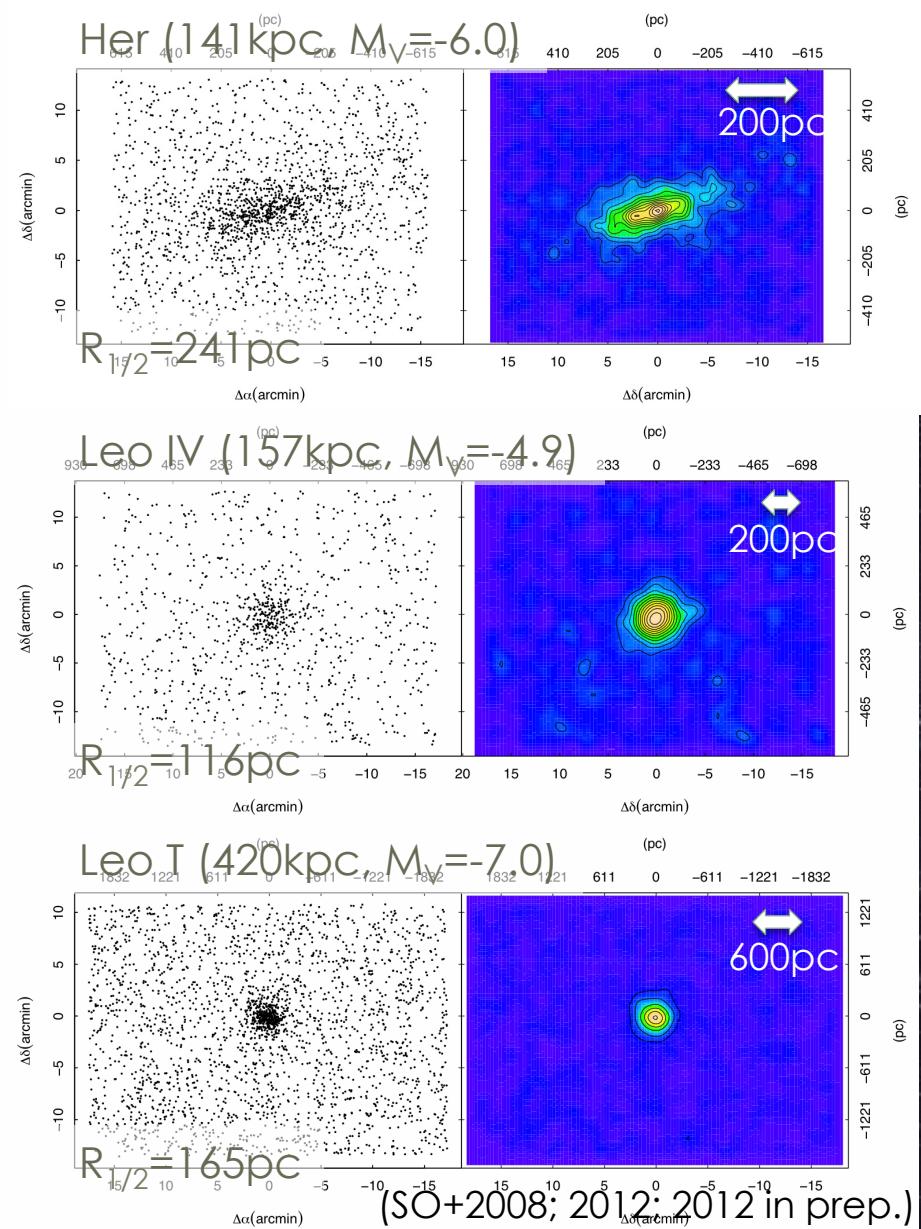

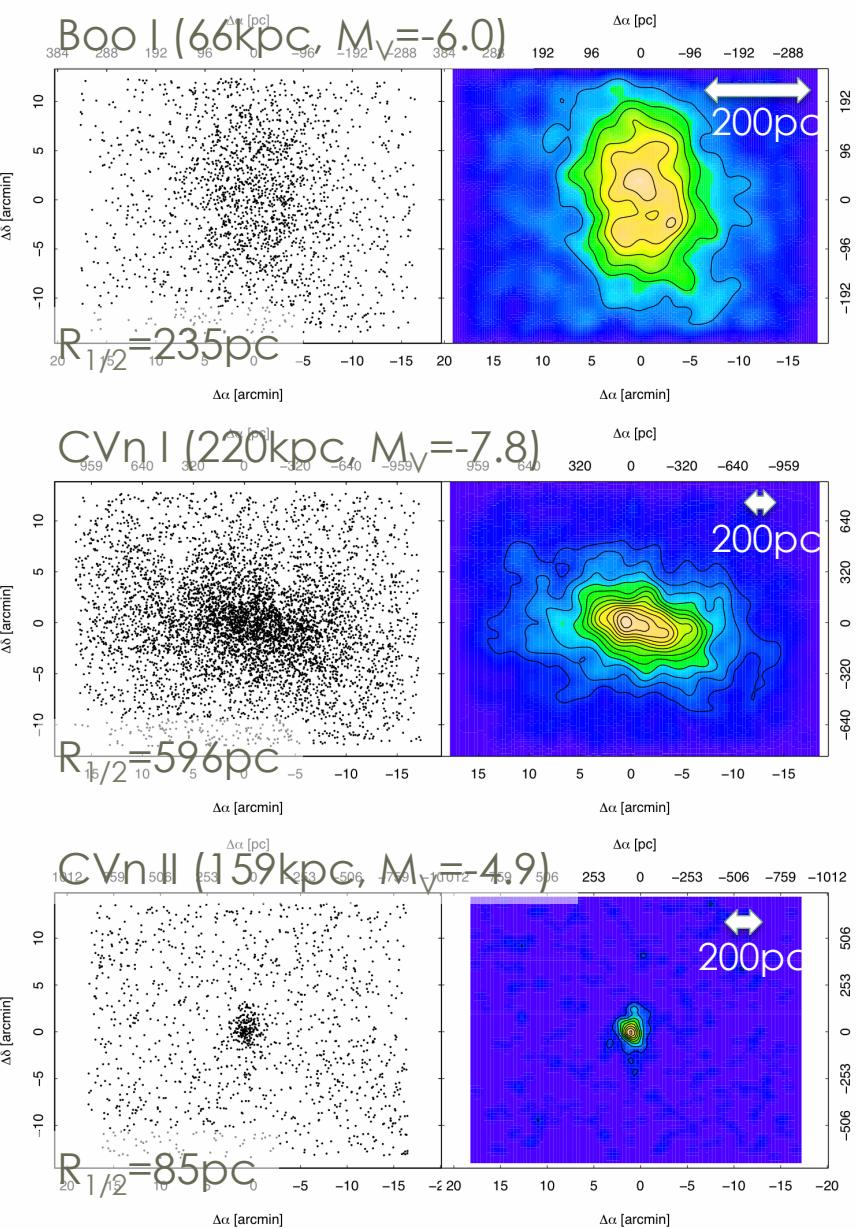

Leo T (420kpc, $M_V=-7.7$)

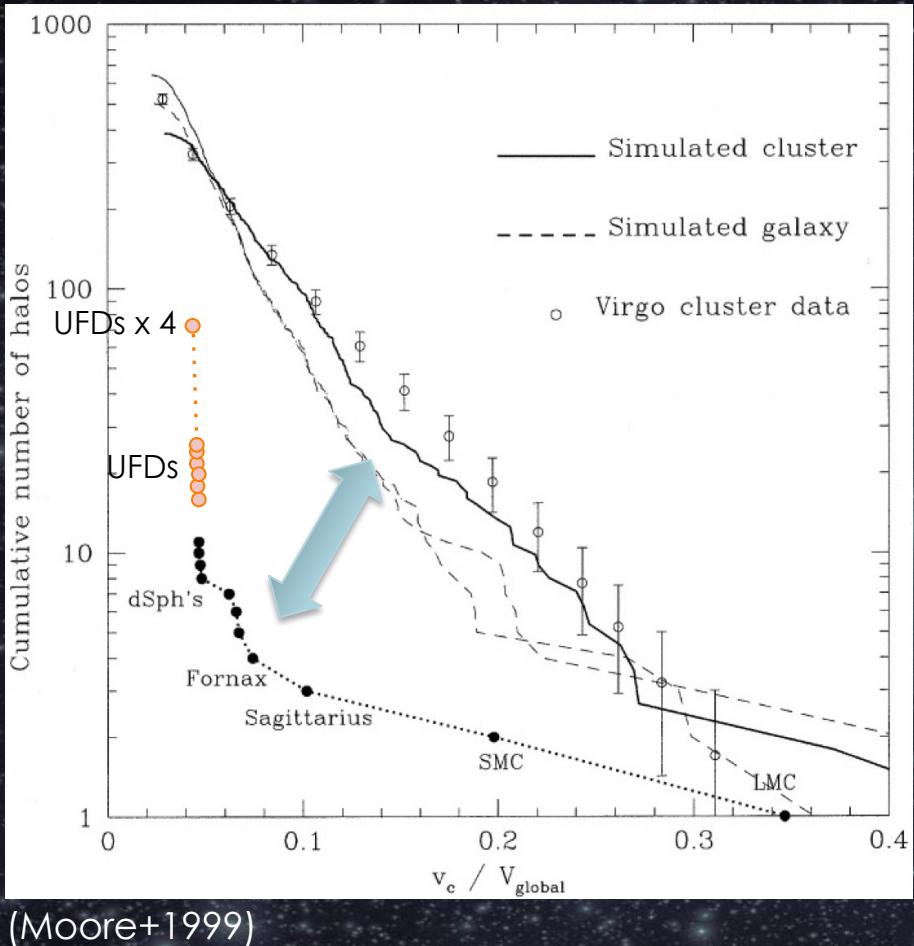

(Okamoto+2008, 2012)

Spatial distributions of UFDs

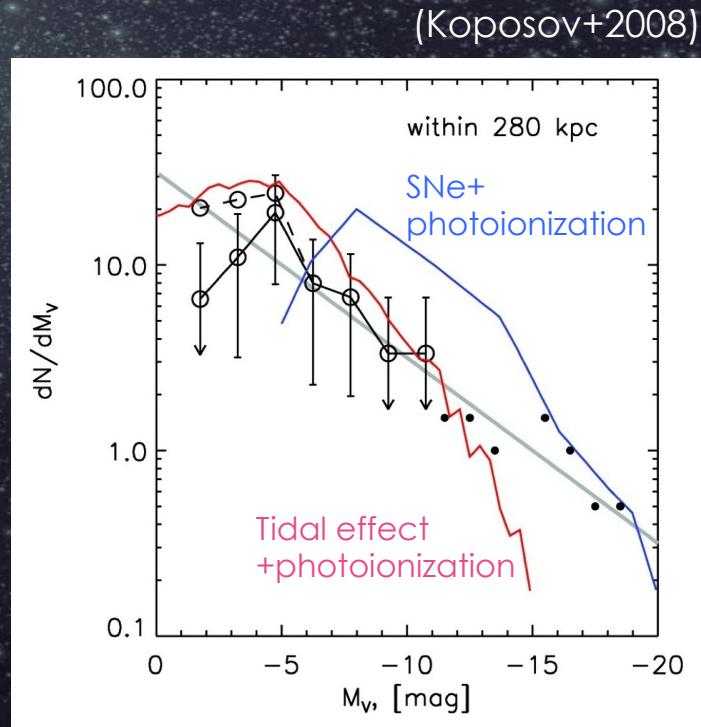

Missing satellite problem

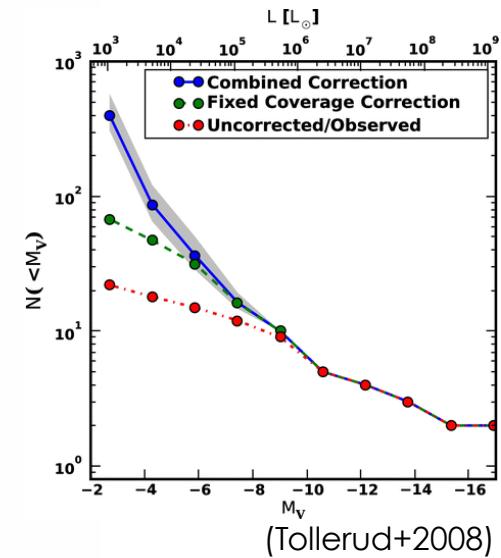

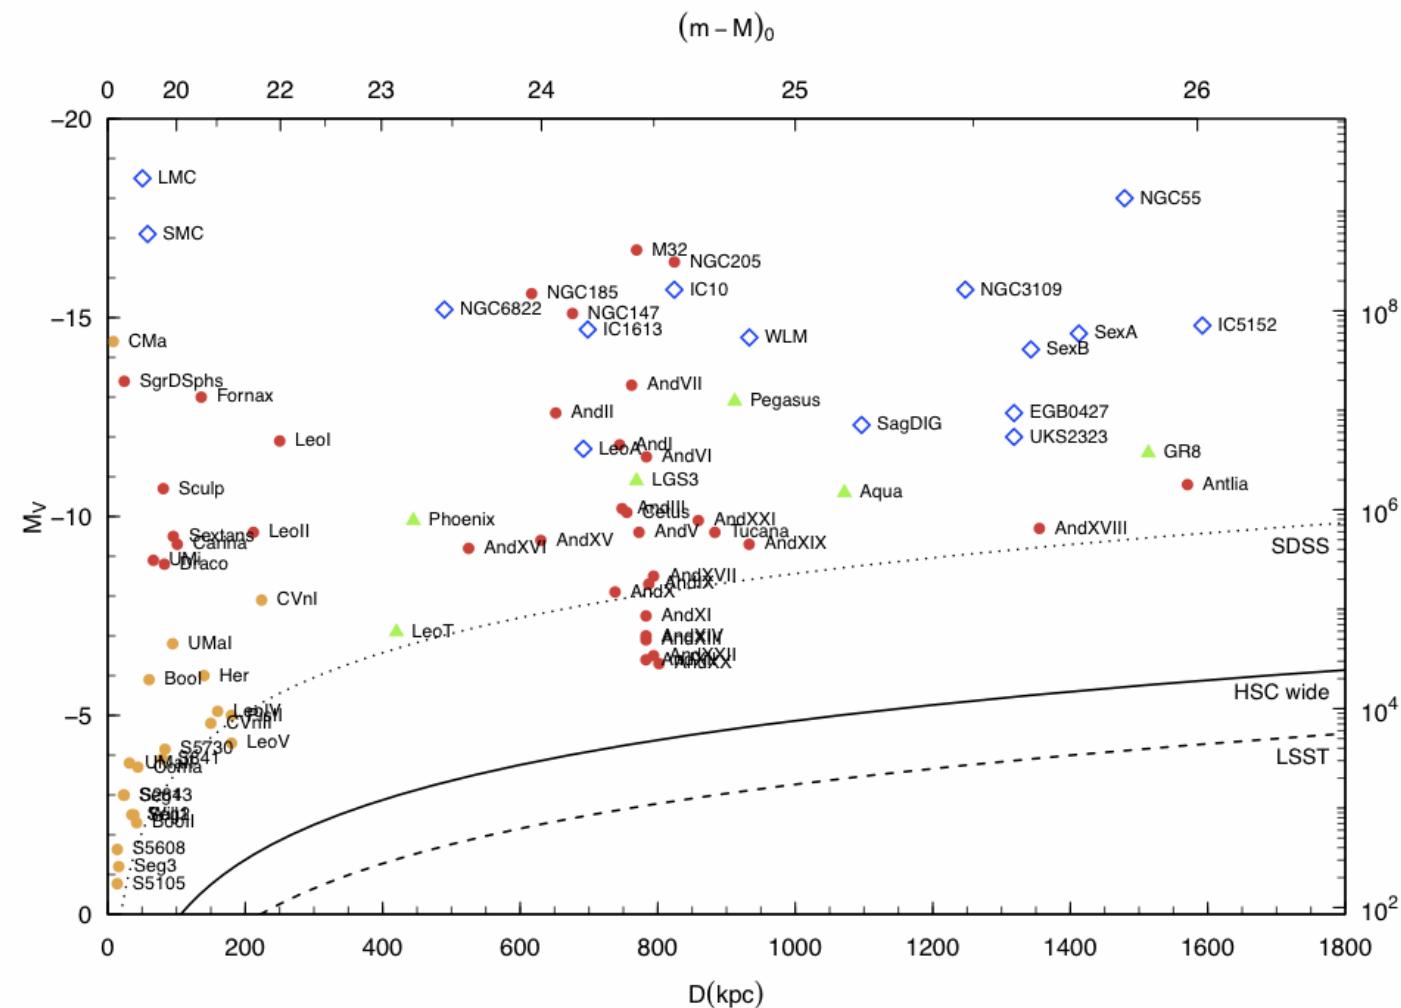

Incompleteness of detection
 $M_V > -5$? $R > 280$ kpc ?

- ❖ SF was suppressed in low-mass halos?
 Reionization (e.g. Gnedin+2000)
 SNe feedback and tidal effects
 (e.g. Larson+1974)
- ❖ Fewer low-mass halos ?
 WDM etc. (e.g. Zentner+2003)
 Cusp or Core (Penarrubia+2010)

Missing dwarf galaxies?

$N_{sat} = 400-600?$

What can we see in HSC catalogue?

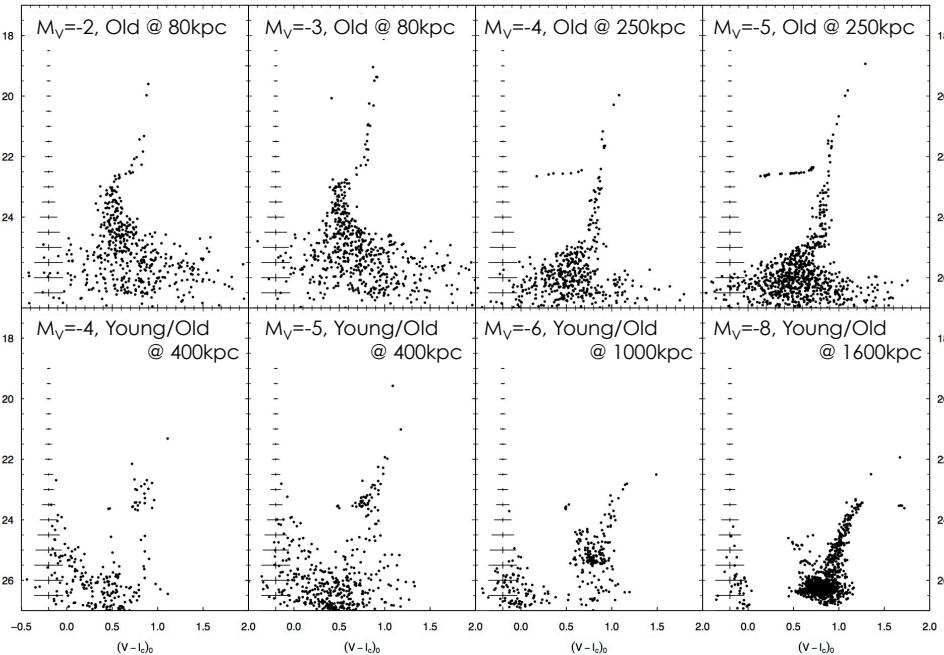

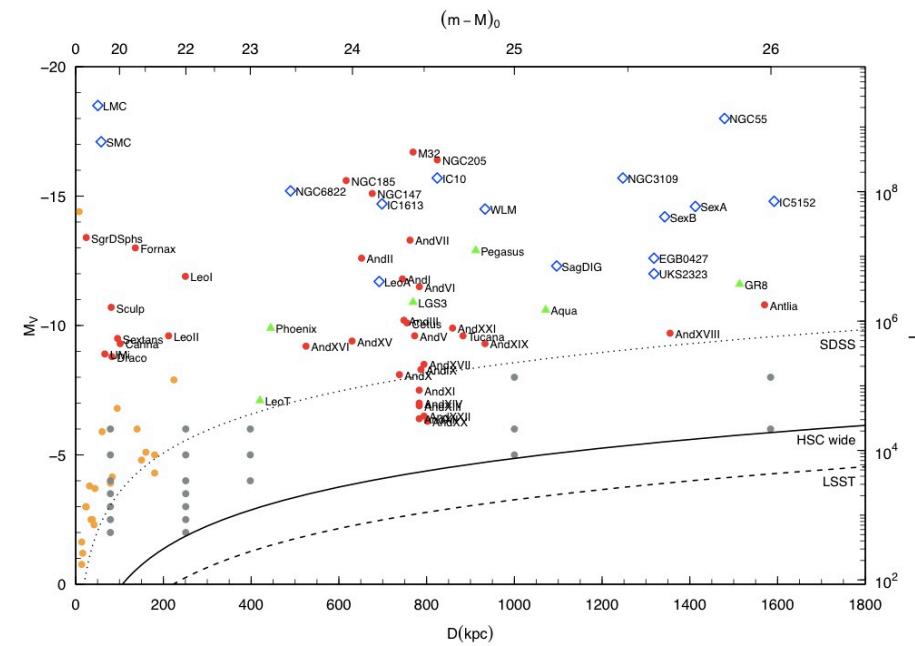

Mock galaxy catalogues :

stellar populations (IMF * theoretical isochrones) + spatial distribution (R_h) + distance
+ observational conditions (photometric error, completeness, etc)
+ foreground / background contaminations

S-cam
blank field data

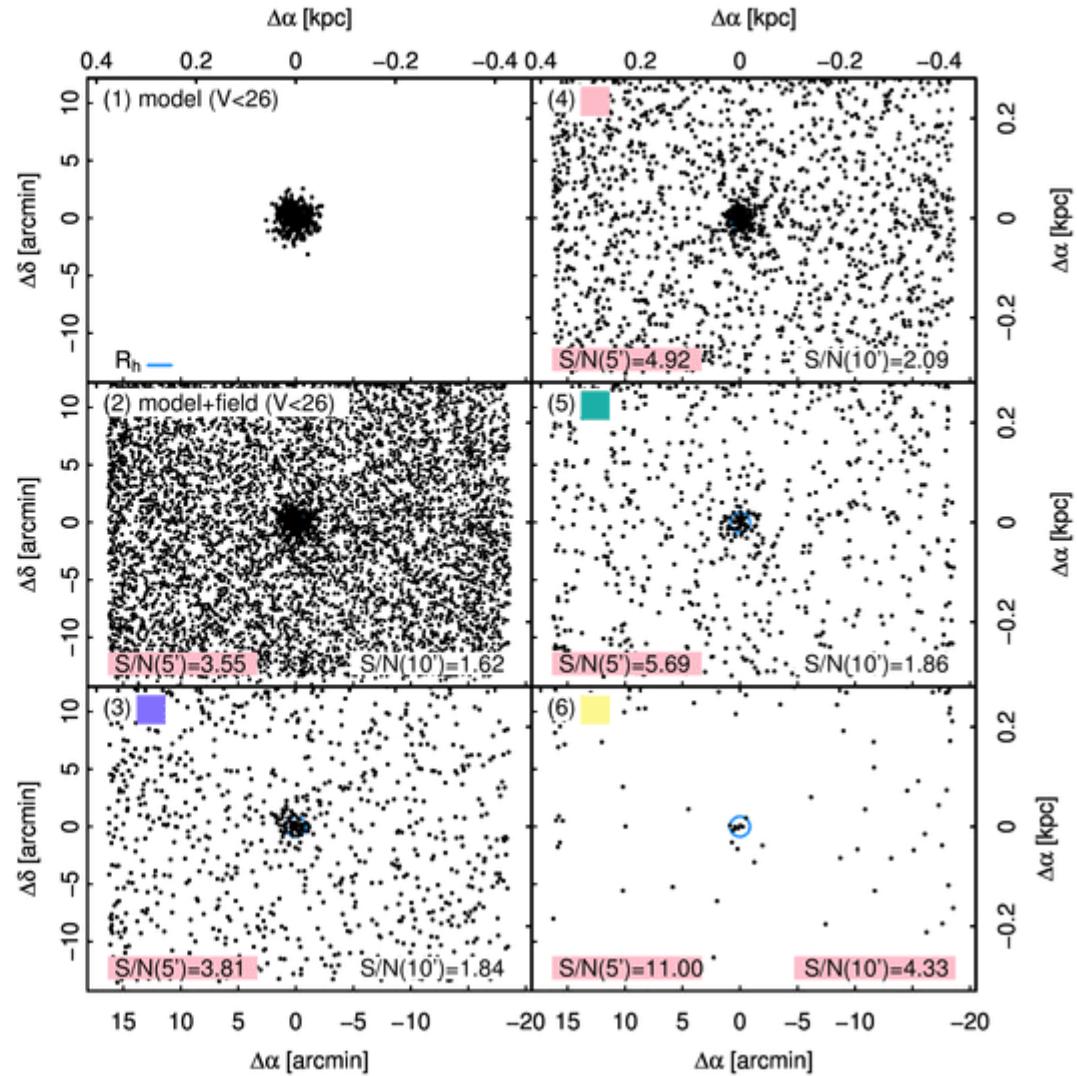

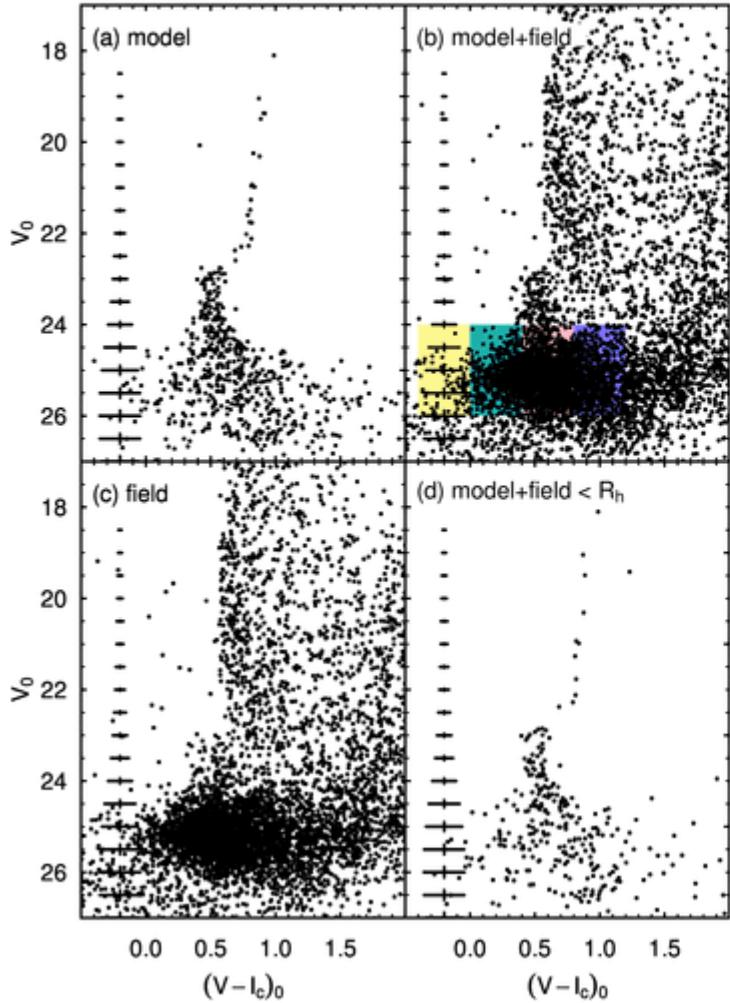

Mock CMDs and spatial distributions of a galaxy (M_V , R_h , D)
to be seen in the HSC wide survey catalogue

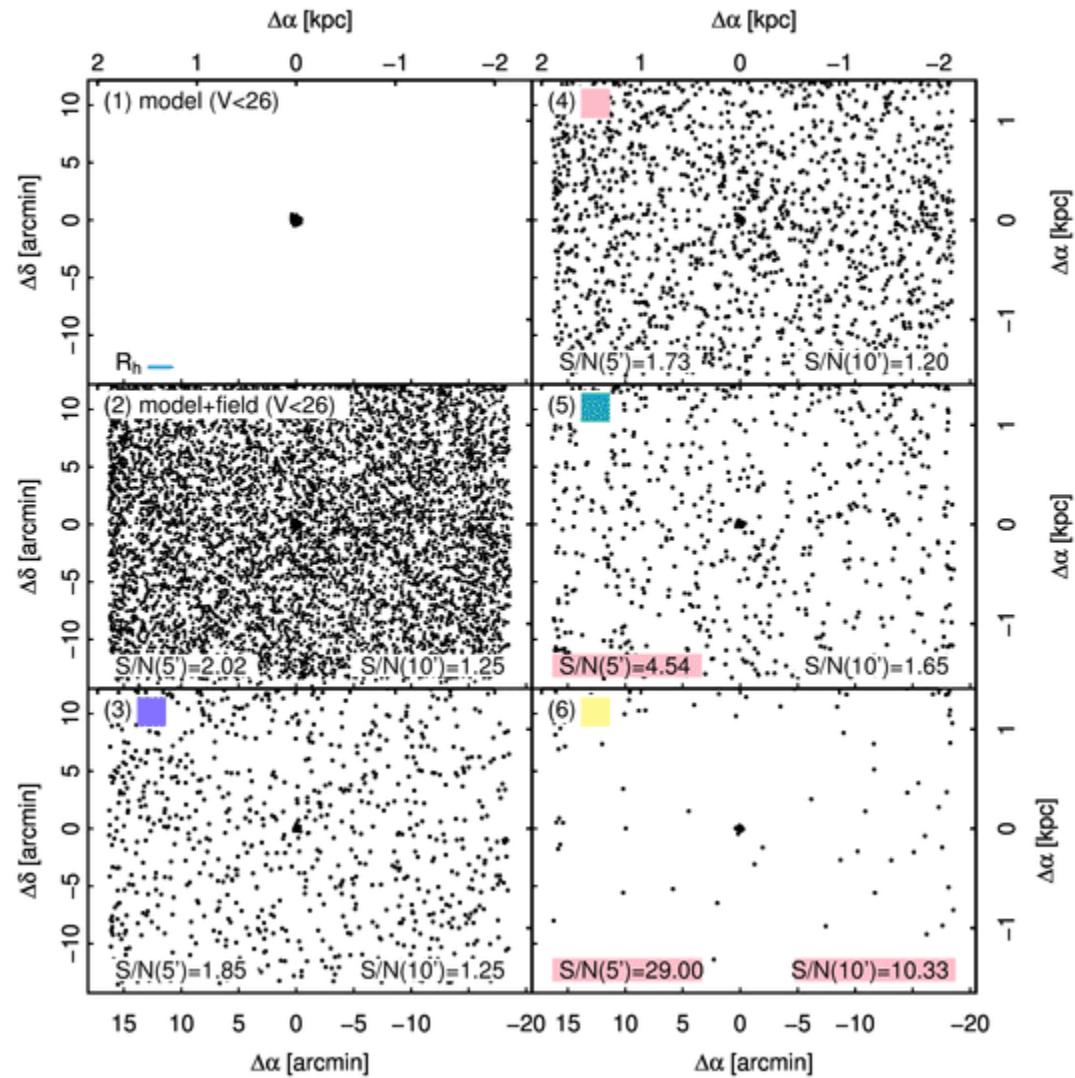

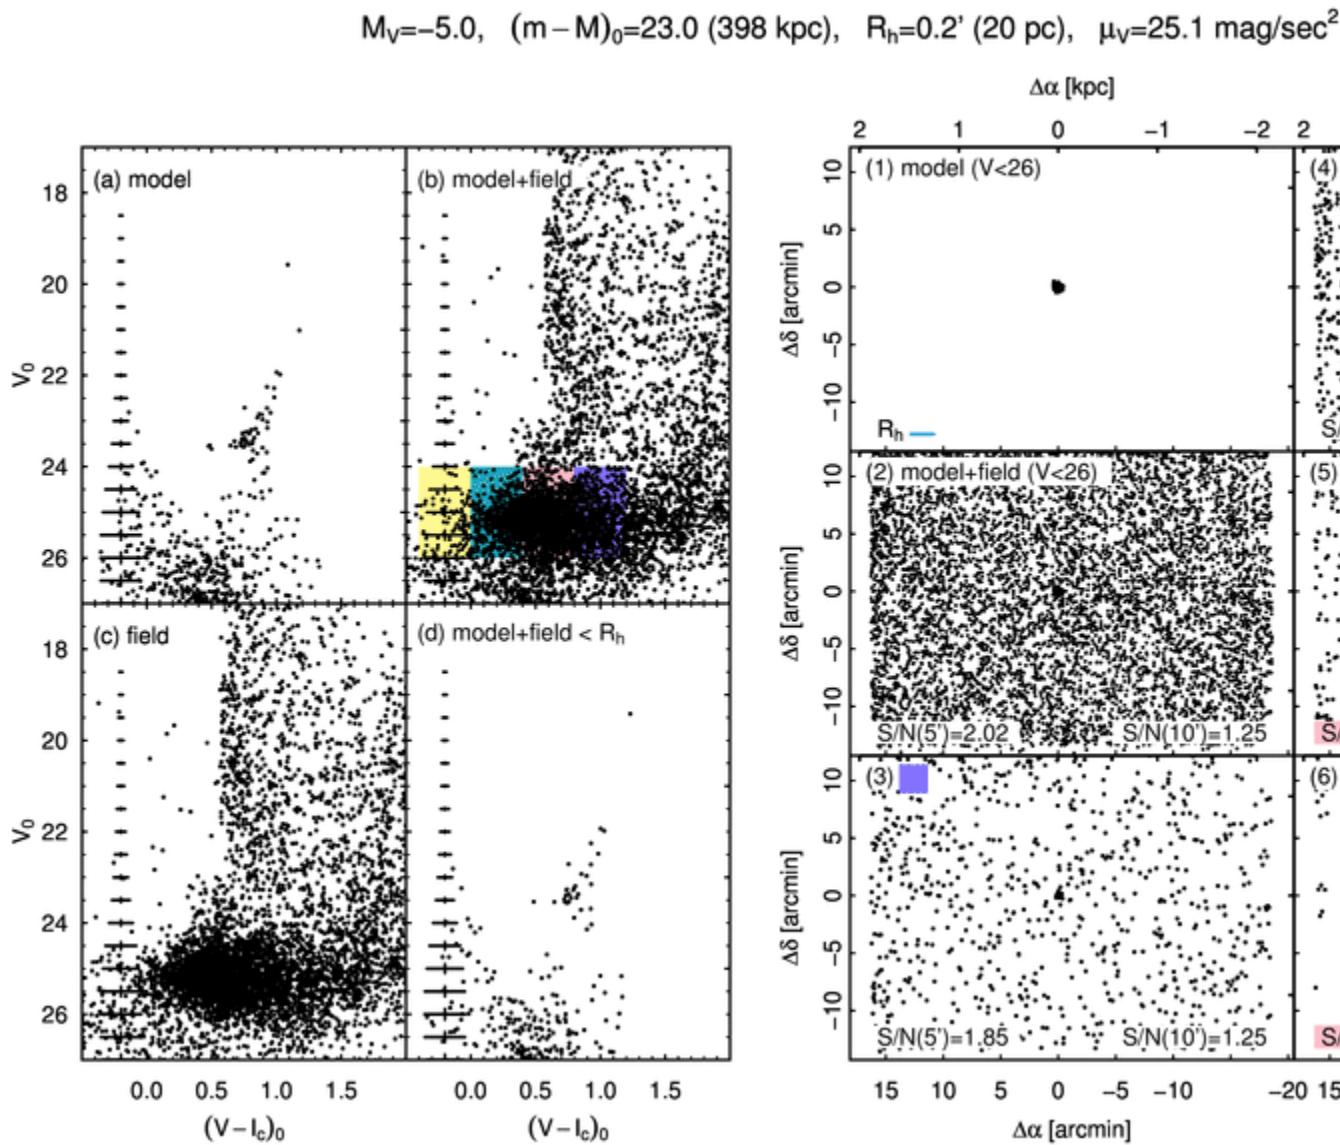

Searching new objects

$M_V=-3.0$, $(m-M)_0=19.5$ (79 kpc), $R_h=0.9'$ (20 pc), $\mu_V=27.1$ mag/sec²

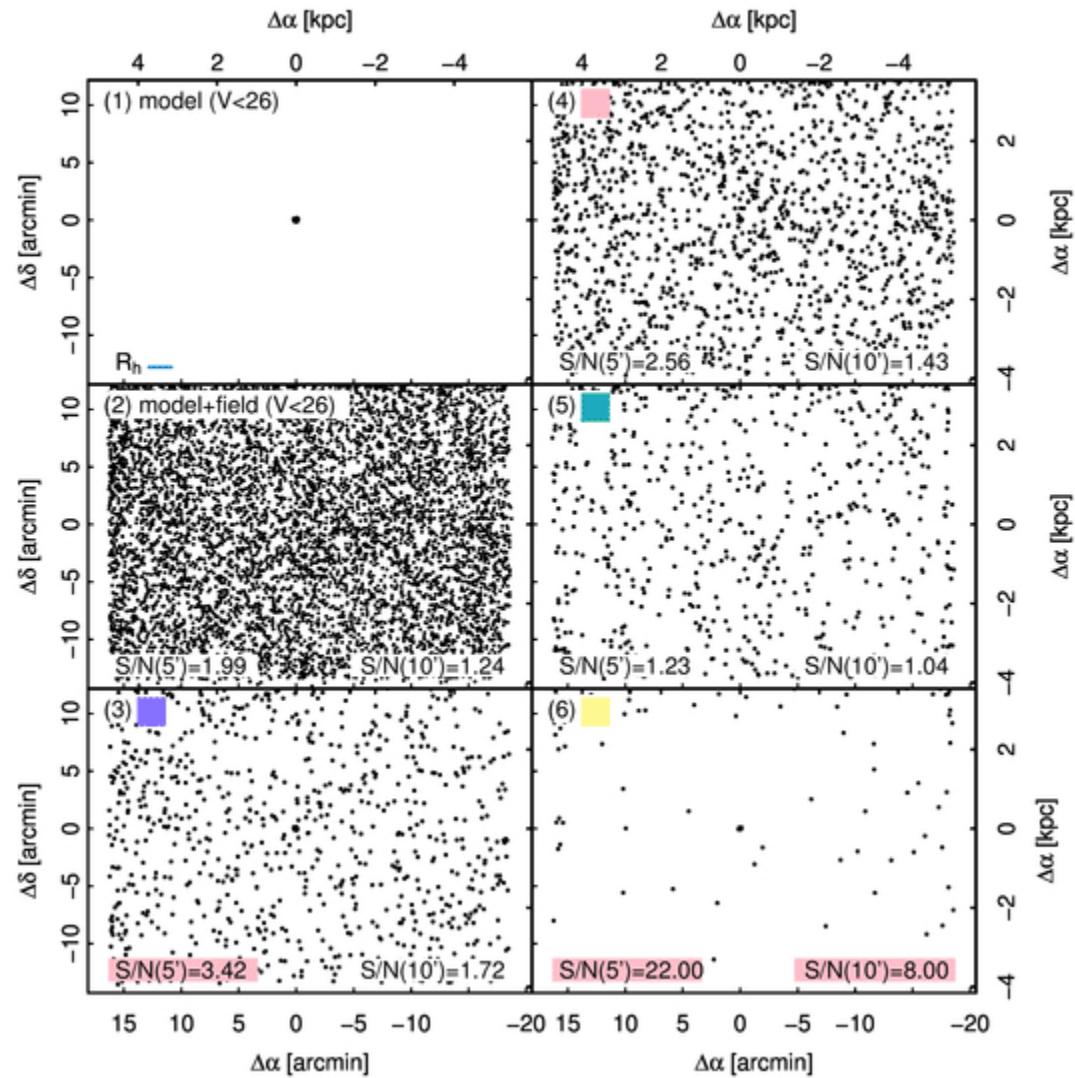

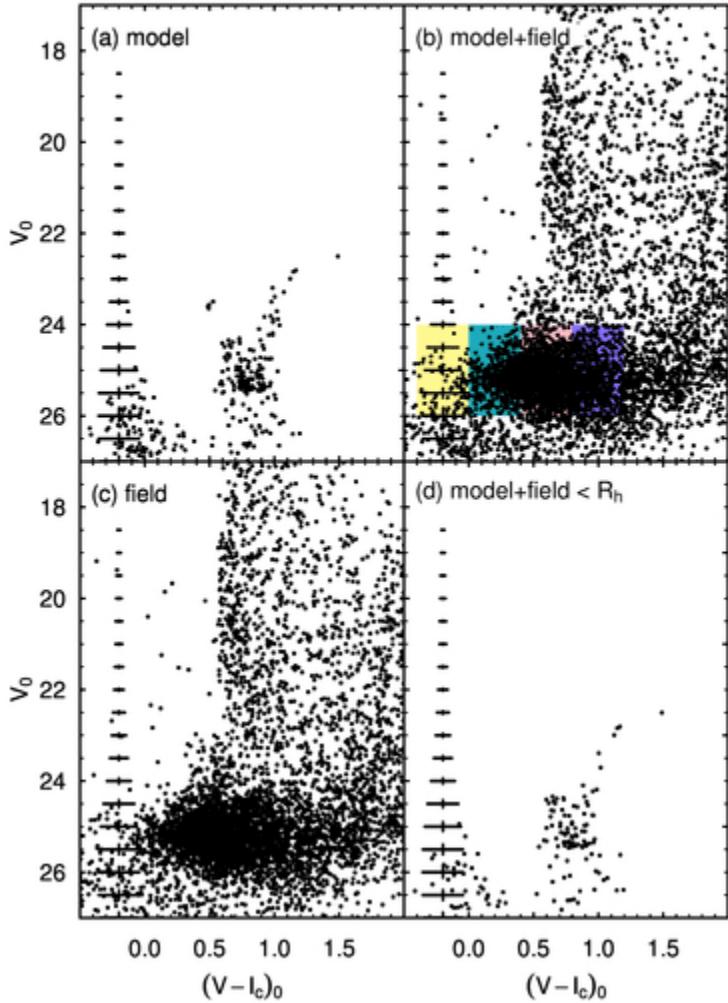

Searching new objects

Searching new objects

$M_V=-6.0$, $(m-M)_0=25.0$ (1000 kpc), $R_h=0.1^\circ$ (20 pc), $\mu_V=24.1$ mag/sec²

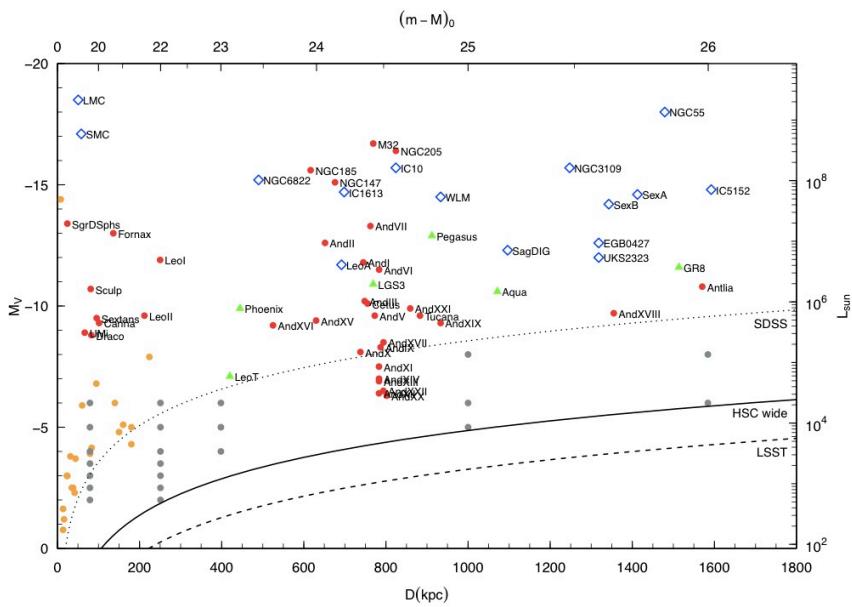

Searching new objects

HSC wide survey can detect :

$D < 250\text{ kpc}$, $M_V \sim -2.5$,

$250\text{ kpc} < D < 1600\text{ kpc}$, $M_V \sim -6$

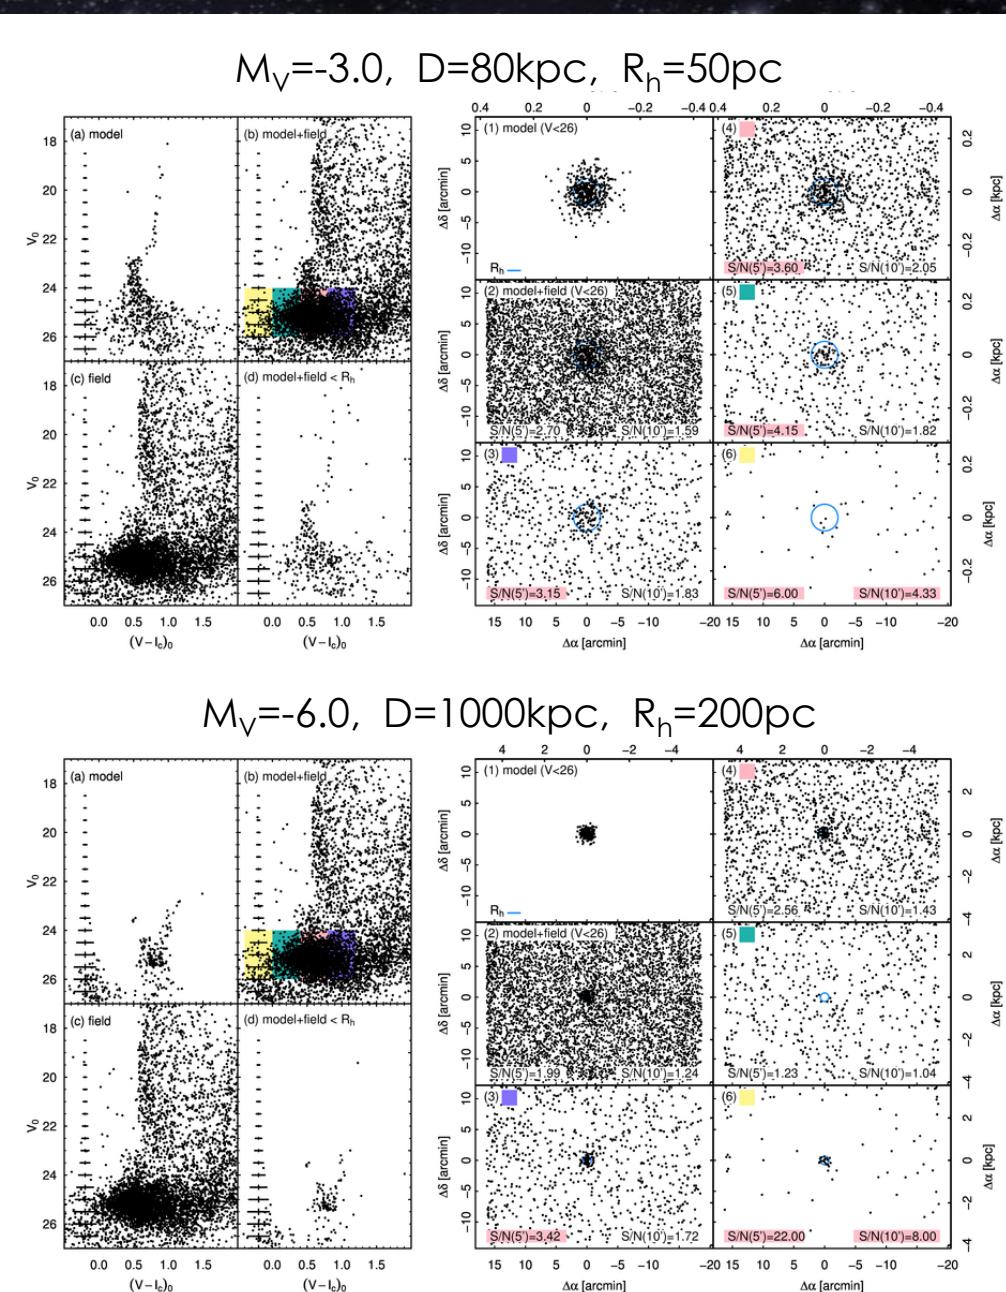

Stellar pop, structural properties

Next step :

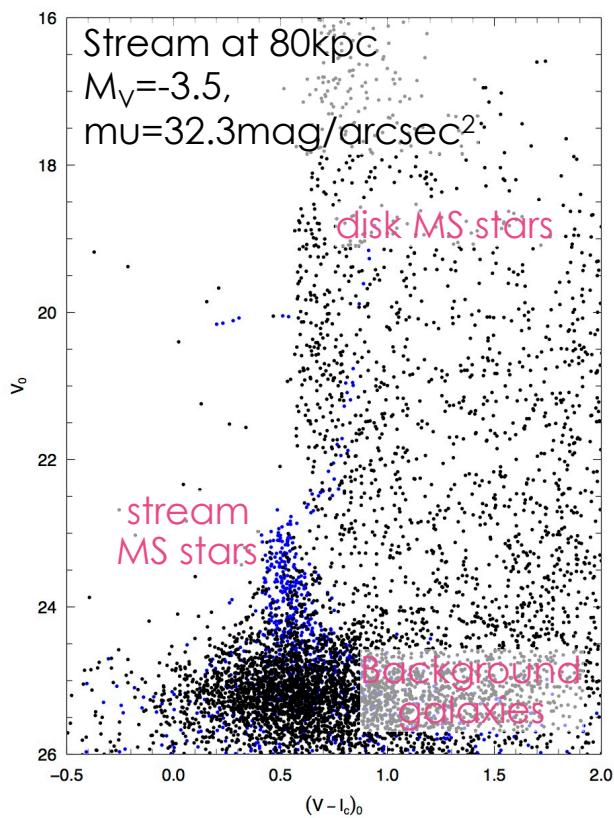

Matched filter for diffuse objects
 (D, pop, phot-error, completeness)

$S/N = \text{observed-field}/\text{control-field}$

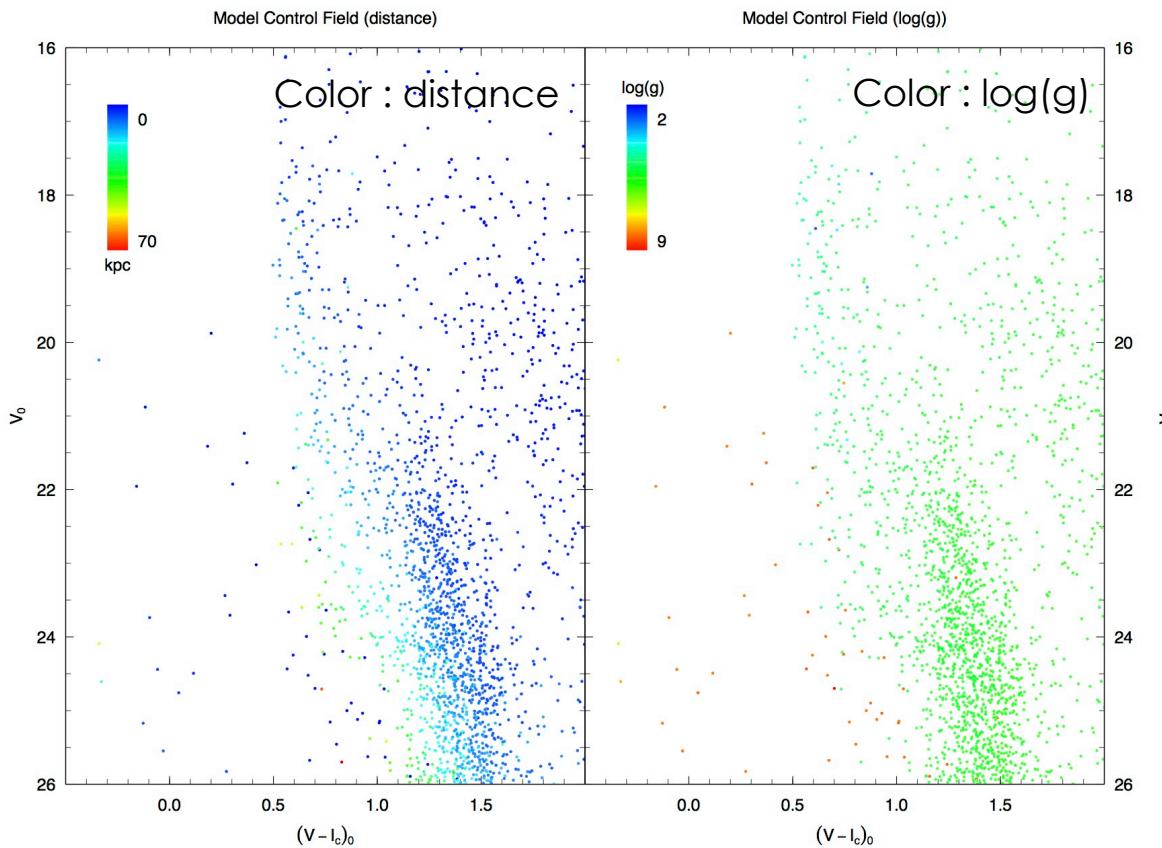

Contaminants in the CMD

- ✧ Galactic foreground stars (dwarf MS, WD...) @ $g-i > 0.4$
- ✧ Background distant galaxies @ $g > 24.5$

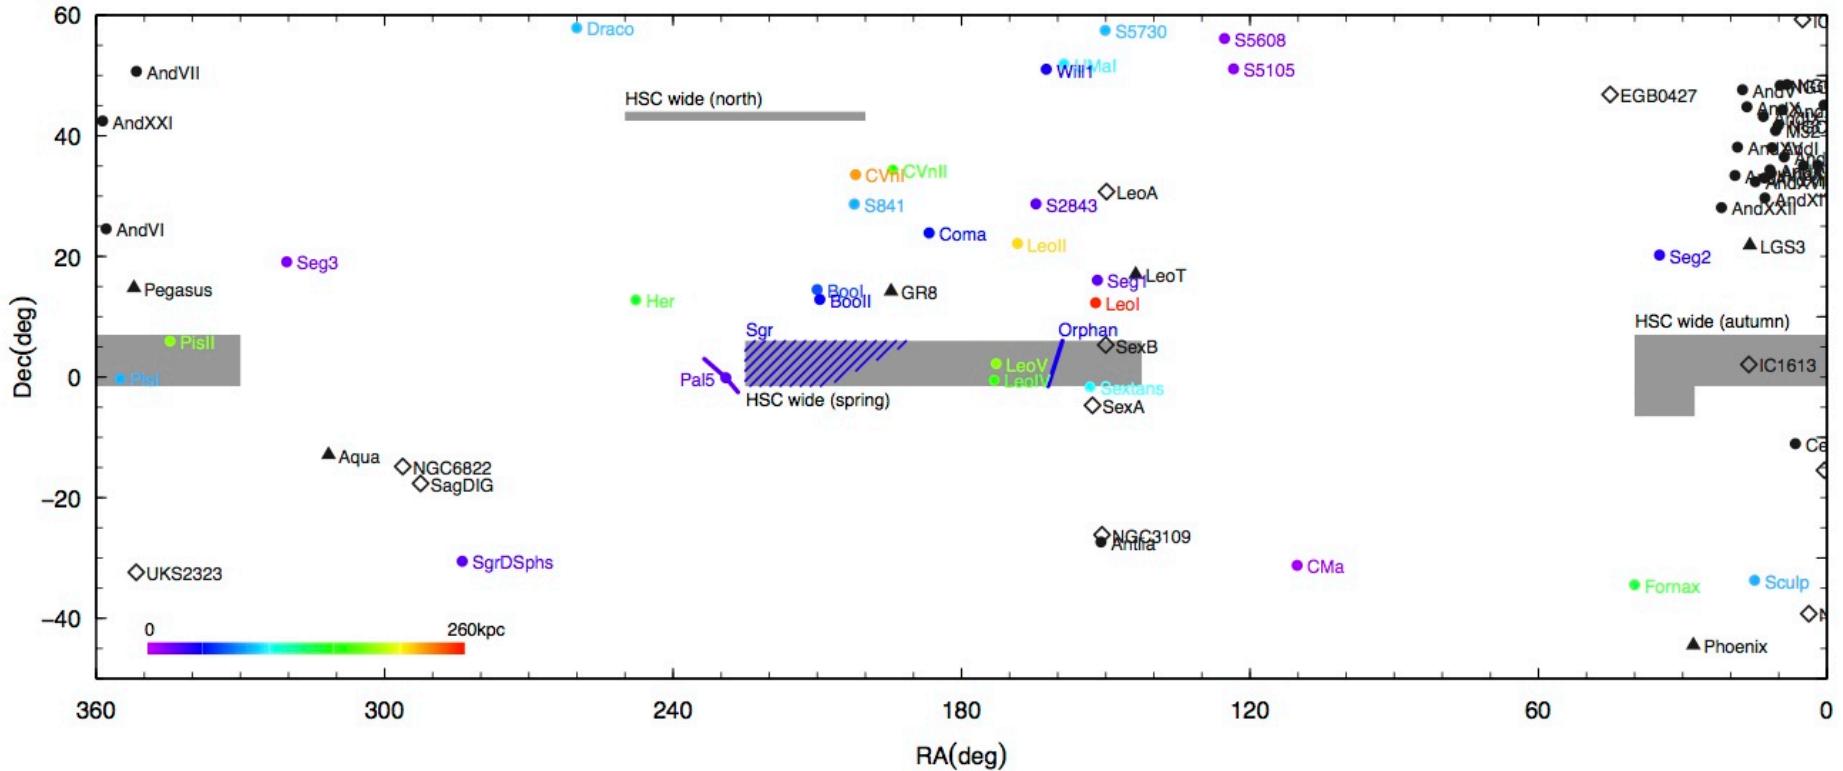

blank field (34'x27')

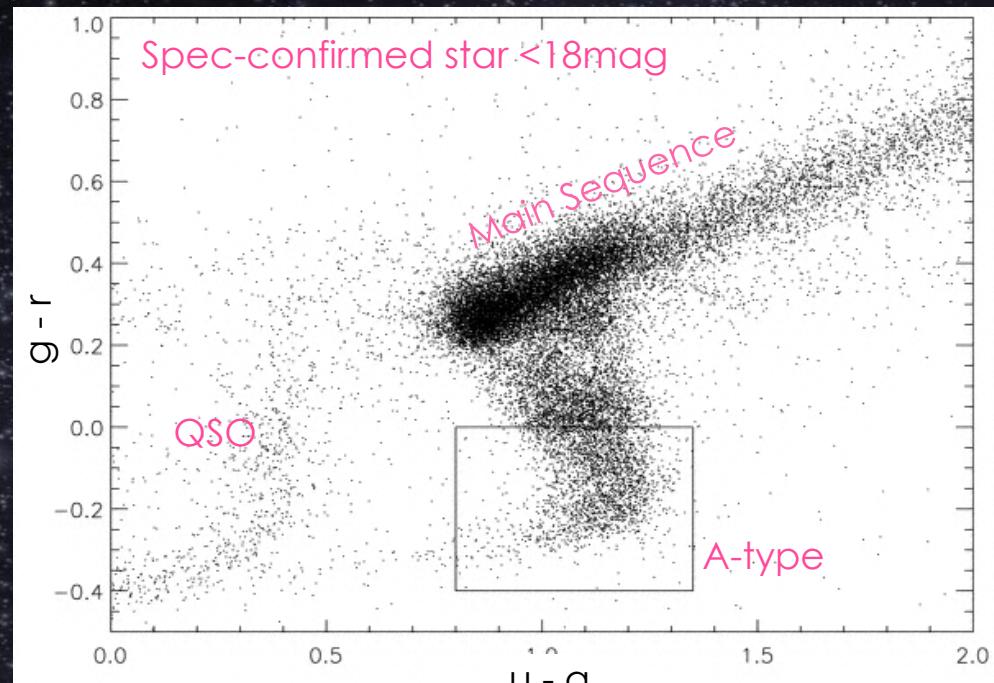

Simulated foreground stars (34'x27')

Known nearby objects in the HSC footprint

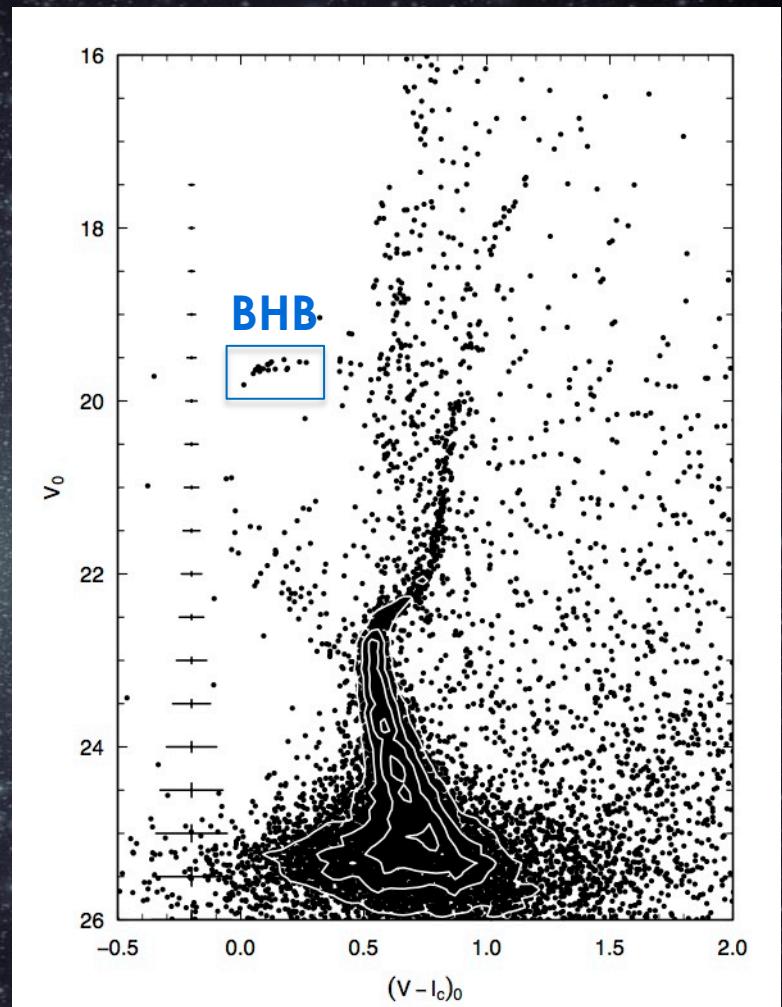

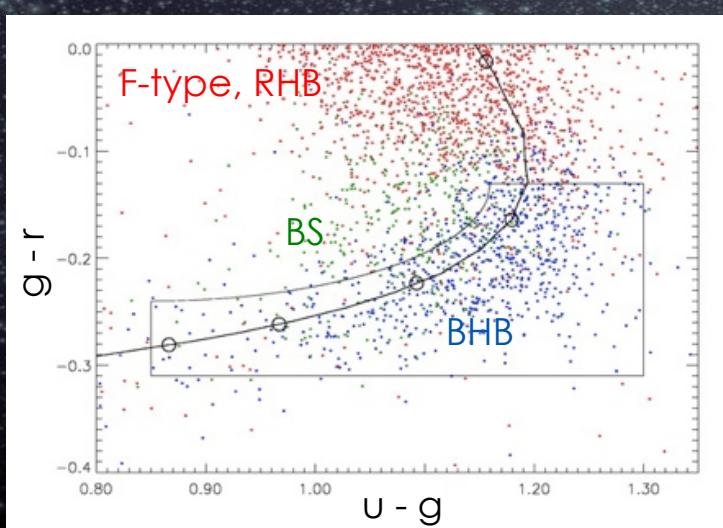

GC - Pal3,
 Streams - Sgr stream, Orphan stream, Virgo OD, Pisces OD,
 dSph/dIrr in LG - Leo IV, V, Pisces I, II, Sextans B, IC1613,
 Ex-LG galaxy - 2 Irr, 1S, (< 12Mpc)

BHB stars in Galactic halo

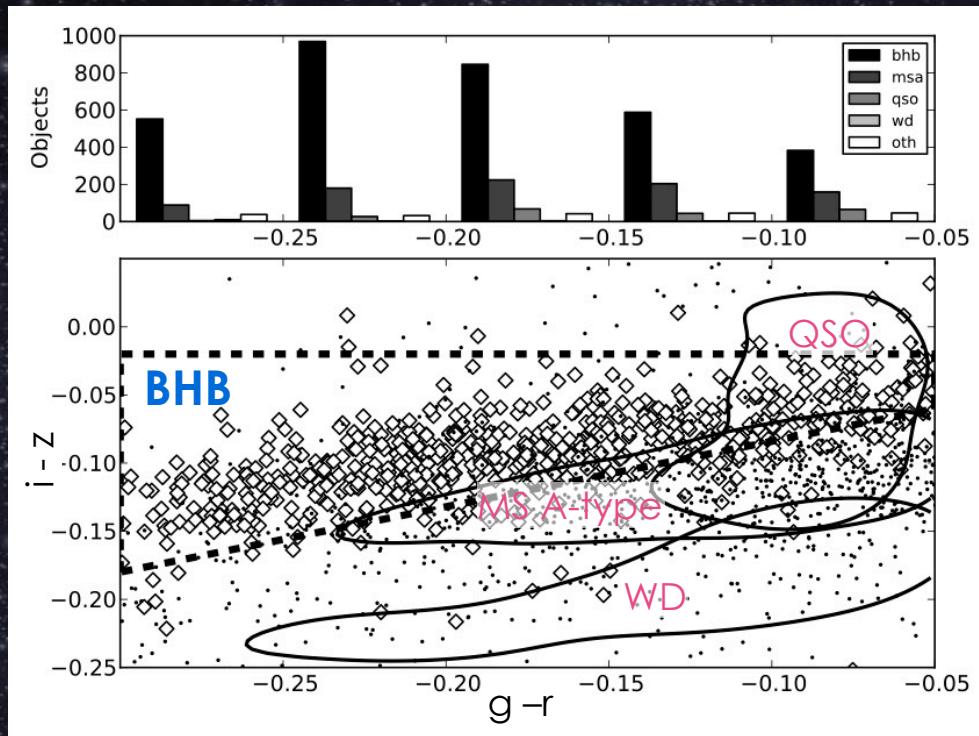

(Sirko+2004)

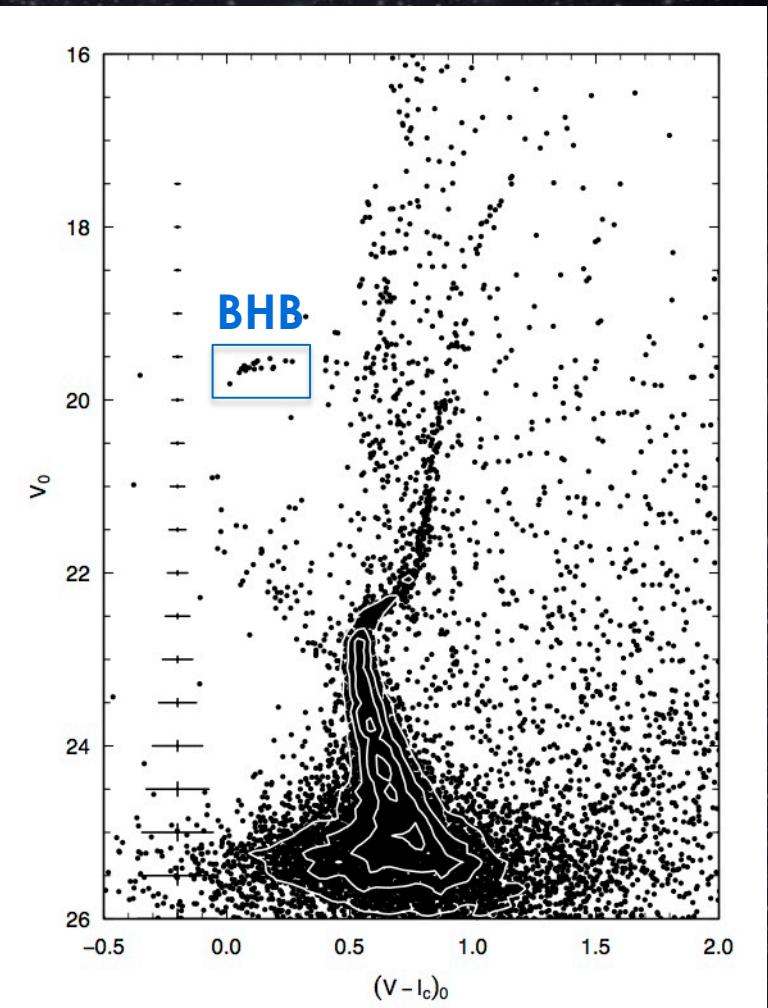

Bootes dSph (Okamoto+2012)

BHB stars in Galactic halo

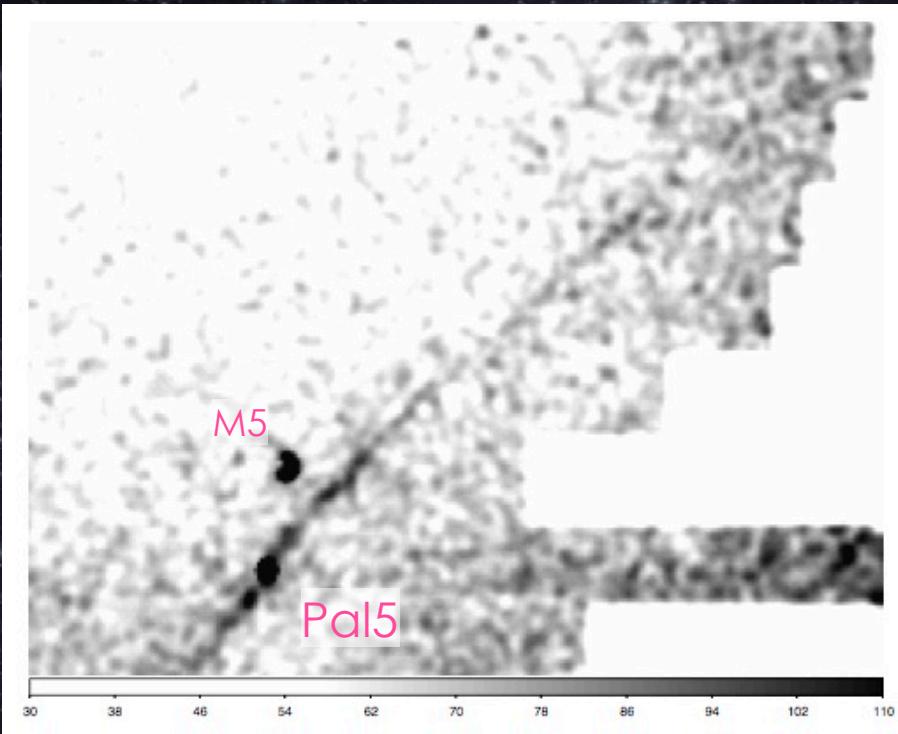

(Vickers+2012)

- ✧ z-based photometric BHB sample
77% pure, 51% complete
(c.f. u-based : 74% pure, 57% complete)
- ✧ $g < 24 \Rightarrow D < 400\text{ kpc}$ ($M_{g,\text{BHB}} \sim 0.6$)
=> 3D mapping of Galactic outer halo

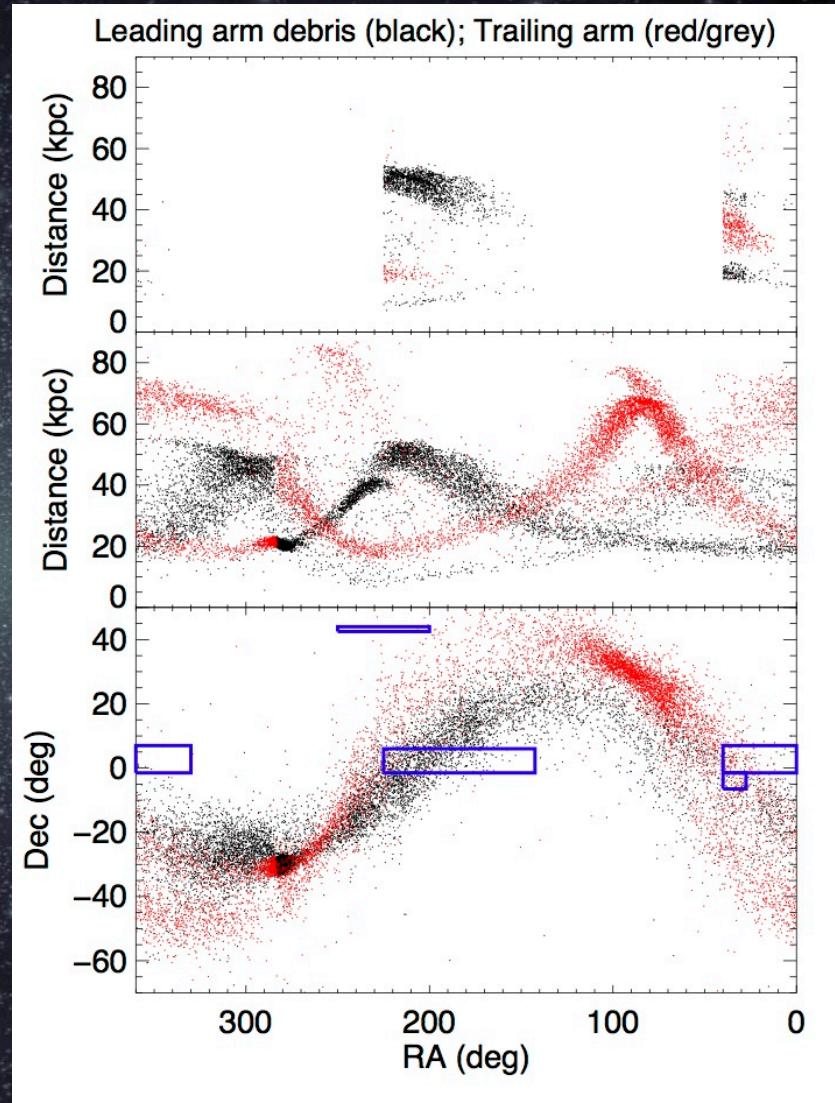

Bootes dSph (Okamoto+2012)

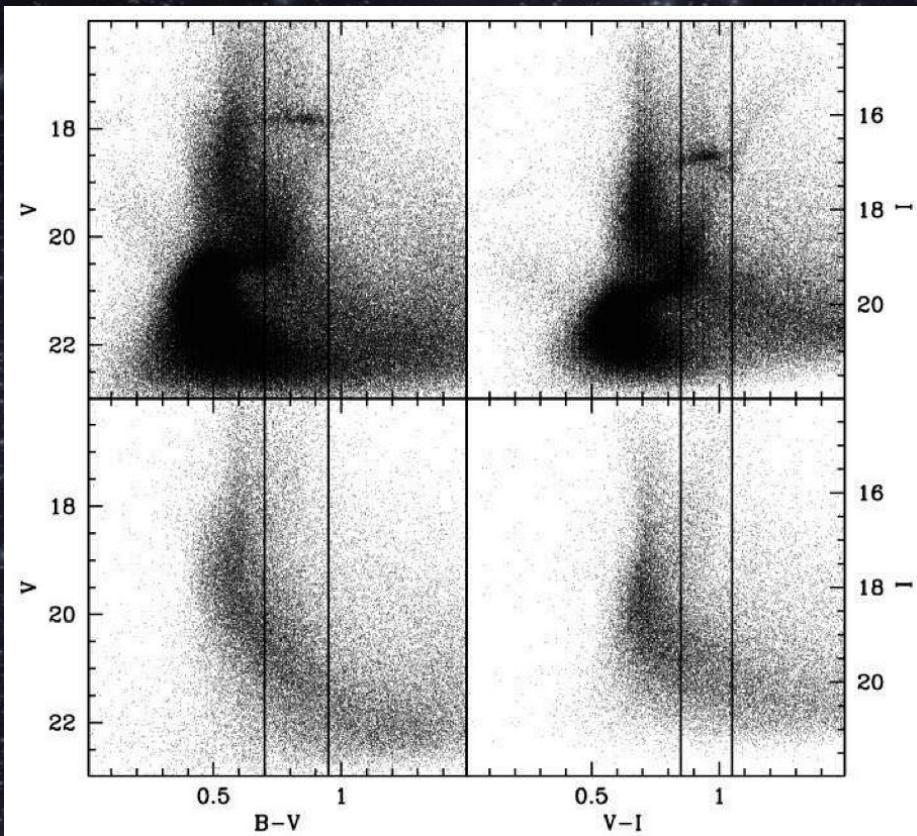

Stellar streams

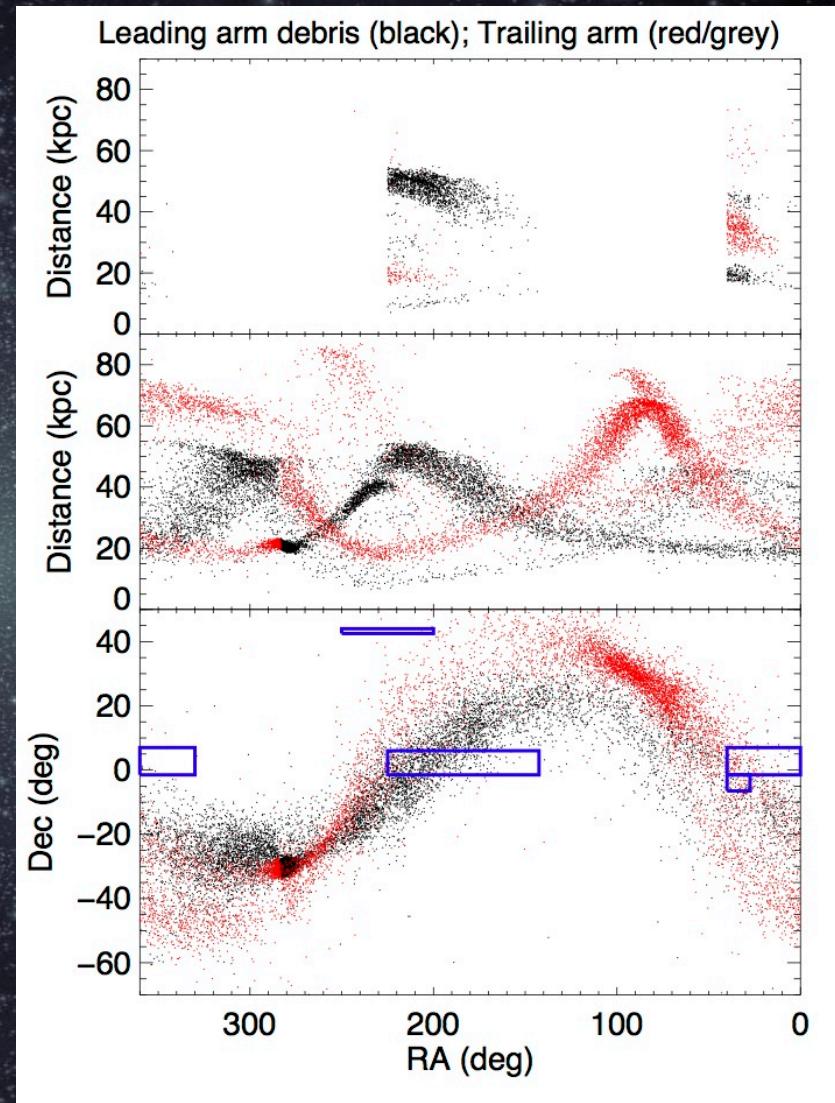

Gaps in the trailing stream of Pal5
~ 900-5000 sub-halos inside 30 kpc?
(Carlberg+2012)

Stellar streams

- ❖ Complex populations
- ❖ Distance determination
=<= BHB, RR Lyrae?, PFS?,
- ❖ Heavy contaminants for the detection of unknown objects

Sgr stream (courtesy of M. Smith)

Galactic Archaeology with HSC wide survey

Wide survey: 1,400 deg², griz ~ 26mag

- ✧ Search unknown Galactic faint satellites
- ✧ Search unknown stellar streams at the outer halo
- ✧ Search unknown distant faint galaxies in the Local Group
- ✧ Study the properties of known streams, dSphs and dIrrs
- ✧ Probe 3D structure of Galactic outer halo by using blue HB stars

Complete sample of visible MW satellites

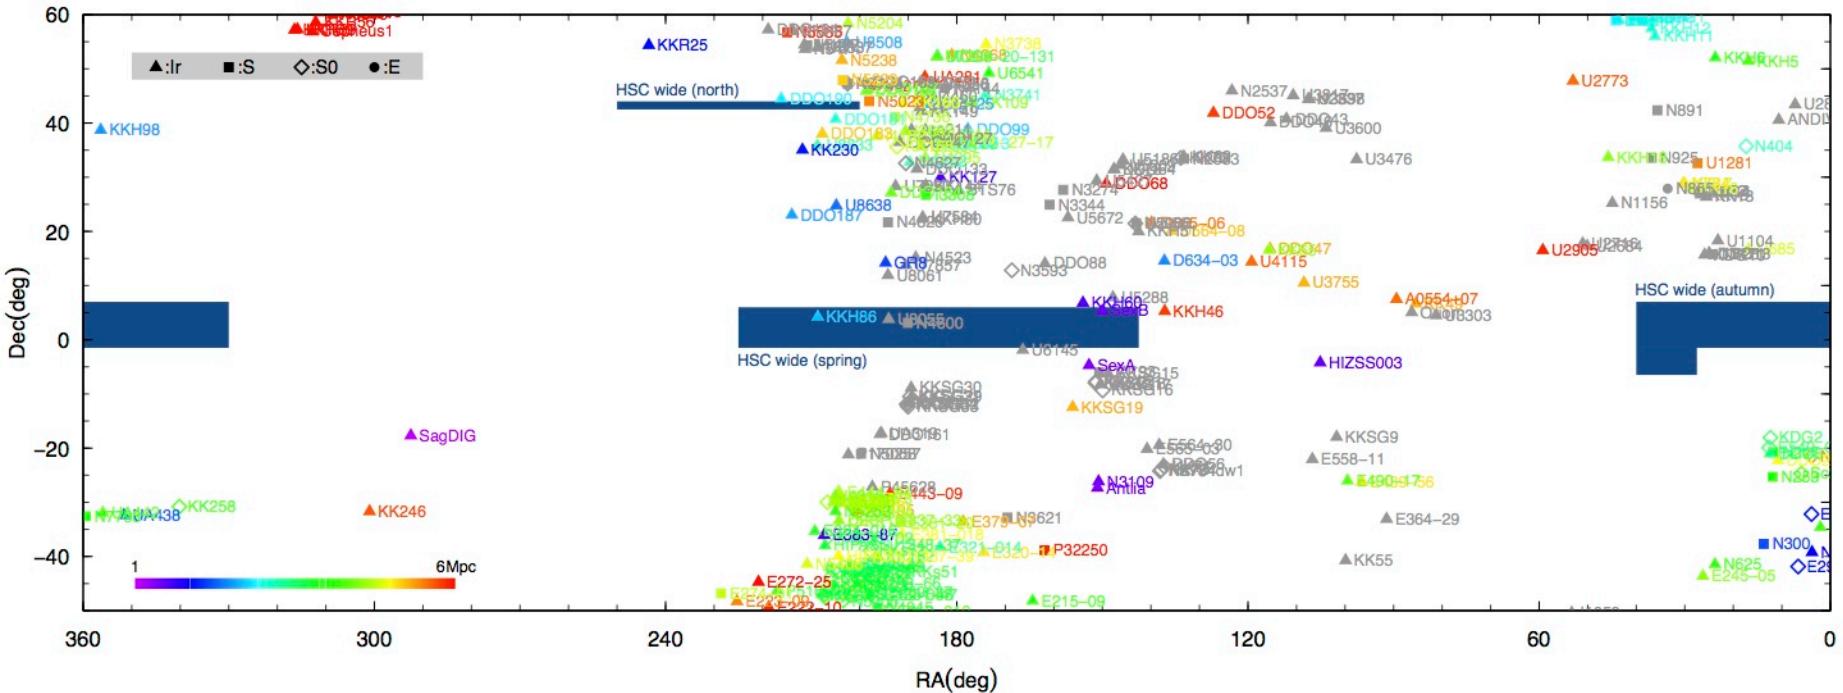

SFH of the faintest galaxy

Internal/External effects on SF in low-mass halo

Distribution and Lumpiness of DM (sub)-halo

Verification of LCDM in the MW scale

Known nearby objects in the HSC footprint

KKH86 (Ir, B=17mag, D=2.61Mpc, $R_{\text{major}}=0.7'$)
 UGC8055 (Ir, B=16mag, D=6.8Mpc, $R_{\text{major}}=0.9'$)
 NGC4600 (S, B=14mag, D=7.35Mpc, $R_{\text{major}}=1.2'$)
